## ID Card Holders

We supply a variety of ID Card Holders to suit your needs whether its for security or visitor passes for even the most demanding access control, building security or electronic point of sale (EPOS) purposes. [Rigid Open Holders](#) [Enclosed Holders](#)

Our ID card holders come in many shapes and forms. They can be flexible or rigid holders which have a hole in them to attach to our neck lanyards, retractable badge reels or ID clips. We recommend badge reels as they are generally less cumbersome to wear and use as well as being more attractive and discrete.

We sell 2 types of identity pass holder:

1. **Open Identity Card Holders** - these securely hold the card in place but expose the card to the elements (though can be easier to remove the card from).
1. **Enclosed Identity Card Holders** - are protective of the card and are better suited if the user doesn't need to remove the card for access control or electronic point of sale purposes.

All of our ID card holders are manufactured to fit standard credit card sizes and are ideal for identity cards, smart cards and security passes. Some of our rigid ID card holders are made to hold multiple cards, either one on each side (open ID card Holders) on 2 inside (versatile buddy enclosed ID Card Holders). Some of our our pass holders can be worn landscape / horizontally or portrait / vertically and are available either clear / transparent or in a variety of colours too.

## **ID Card Holders – Product Benefits:**

- 
- 1. Durable - to attach to other ID Card Accessories such as Neck Lanyards or Badge Reels
- 2. Effective - to display ID Cards and Visitor Badges for security purposes
- 2. Convenient - for swiping smart cards through EPOS terminals or Identity cards through access control systems
